

New features

DB Optimizer provides the following new features.

17.0.4 New features

Added support for latest SQL Server version

DB Optimizer 17.0.4 adds support for SQL Server 2019.

17.0.3 New features

There are no new features in DB Optimizer 17.0.3. This release does include a number of fixed issues that you may review in [Fixed issues](#).

17.0.2 New features

Updated version

DB Optimizer 17.0.2 is simply an update to the version number.

17.0.1 New features

Continued licensing updates

DB Optimizer 17.0.1 includes additional licensing updates to bring it into standard with other IDERA products.

Redesigned components

DB Optimizer 17.0.1 contains the following redesigned components for a better user experience:

- Main toolbar
- Data Source tab
- Project Explorer tab
- Main window tab right-hand mouse options

SQL Server enhancements

DB Optimizer 17.0.1 offers a number of SQL Server-related enhancements including:

- The Tuning Statement window includes a drop-down list of schemas when viewing SQL Server databases.
- The DB Optimizer Profiler now properly displays SQL statement detail.
- Improved error messages.

17.0.0 New features

Updated licensing

DB Optimizer includes a new licensing process to bring it into standard with the rest of the DB PowerStudio products.

Updated Installer

The installer for DB Optimizer now:

- Verifies that a supported version of windows OS exists on the machine before continuing with the installation
- Offers offline .MSI files for installation

Removed Auto-Update and Install New Software features from Help menu

This version of DB Optimizer includes an updated **Help** menu that no longer includes **Auto-Update** and **Install New Software** options.
