

# IBM DB2 LUW

| Connection Parameter                                    | Description  |
|---|--|
| Use Alias from IBM Client or Generic JDBC Configuration | If you choose to use the alias from the IBM client, select the appropriate alias name. Otherwise, choose Generic JDBC Configuration and enter the connection parameters, as specified.   |
| Schema ID   | Optional. The name of the database schema.   |
| Function Path   | Optional. Enter an ordered list of schema names to restrict the search scope for unqualified function invocations.   |
| Security Credentials                                    | The log on information required by SQL Query Tuner to connect to the data source.  |
| Auto Connect  | Automatically attempts to connect to the data source when selected in Data Source Explorer, without prompting the user for connection information.   |
| JDBC Driver (Advanced)                                  | The name of the JDBC Driver utilized by SQL Query Tuner to initiate a JDBC standard access connection.   |
| Connection URL (Advanced)                               | Used by the JDBC Driver to connect with a data source. Often contains host and port numbers, as well as the name of the data source to which it connects.<br><br>For example:<br><br><code>jdbc:postgresql://host:port/database</code><br><code>jdbc:derby://host:port/database</code> |
| Custom JDBC Driver Properties (Advanced)                | The name and property value of any custom JDBC drivers associated with the data source.  |
