## **Configuring Precise for Oracle**

This section includes the following topic:

Updating the Oracle version

## Updating the Oracle version

When you upgrade your Oracle version, You must uninstall the monitored instance(s) from Precise, and then reinstall the monitored instance(s) using the same instance ID.

- 1. Make sure the Warehouse Maintenance (Weekly) does not run soon.
- To uninstall
  - a. Navigate to the AdminPoint installation.
  - b. Select Instances and Clusters.
  - c. Select the instance(s) to be uninstalled, and then click **Delete**.
- 3. To reinstall:
  - a. Navigate to the AdminPoint installation.
  - b. Select Instances and Clusters.
  - c. Click Add Instance.
  - d. Complete the appropriate fields, and then click Advanced.
  - e. Click the option to install using the same instance ID (Associate the instance with the data of the deleted instance).

◑

If the Warehouse Maintenance (Weekly) Warehouse Process is scheduled to run in between uninstalling/ reinstalling, in Parameters, make sure the box to Purge data of deleted instance is not checked.
