

Monitoring SQL Server instances with TLS 1.2 enabled

Precise 10.0 includes enhancements to enable monitoring SQL Server instances using TLS 1.2 protocol without the need to enable FIPS.

Prerequisite:

- The default driver **SQL Server Native Client 11.0** must exist on the monitoring instance, Precise for SQL Server Focal Point, and Precise for SQL Server PMDB machines.

When monitoring TLS 1.2-enabled SQL Server instances, the corresponding PMDB instance must use TLS 1.2 and vice versa.
