Client Computers (Count) alert

The Client Computers (Count) alert provides the number of unique client computers connected to the SQL Server instance. SQL Diagnostic Manager measures this value by getting the count of processes from distinct computers in `sysprocesses` table.

> To enable alerting when this metric is outside its established baseline, click the **Baseline Thresholds Enabled (as percentage of baseline)** check box in the Alert Configuration window.

SQL Diagnostic Manager identifies and resolves SQL Server performance problems before they happen. Learn more > >
