Basic Configurations

To configure the basic SQL Safe configurations, go to the **Basic** tab of the **Configure General Preferences** option from the **Administration** tab.

In this section, you can set the following options:

- Automatically refresh status check this option to have the status automatically refreshed on the screen. If you select this option, you can also define the Number of seconds between each refresh.
- Return on Investment (ROI) In this option, you can define the TCO/GB (total cost of ownership per gigabyte) that SQL Safe will use to calculate the ROI. By default, this value is set to 200\$/GB.
- **Troubleshooting** you can define the following options:
 - Enable Debug Logging where you can click Advanced to get additional logging options.
 - Do not use ICMP Ping when contacting hosts.
