

## Specify policy properties

The **Name the Policy** section allows you to give your policy a name and a description. It is important to give your policies easily identifiable names and provide descriptions that help you select the appropriate policy during audits. The policy name and description can be changed later using the [Policy Properties](#) window.

The screenshot shows a window titled "SQL Secure Create Policy" with standard Windows window controls (minimize, maximize, close) in the top right corner. Below the title bar, the section is titled "Name the Policy" with a subtitle "Specify a name and description for this new policy." and a globe icon with a green plus sign. The main area contains two input fields: "Name" with the text "CIS for SQL Server 2019" and "Description" with the text "Center for Internet Security - Security Configuration Benchmark for Microsoft SQL Server 2016, v1.0.0, August 17, 2017". At the bottom right, there are four buttons: "< Back", "Next >", "Cancel", and "Help".

Click **Next** to go to the [Configure the Policy](#) Section.
