Select SQL Server objects to audit

In the **Select SQL Server Objects to Audit** section of this wizard, you can specify which database or server objects IDERA SQL Secure will audit to collect security information. By default, SQL Secure audits all SQL Server objects.

To select objects to audit:

1. Check the objects you want to audit in the list.

Specify which SQL Server objects	to audit		
Select filter for databases and databas	e objects to collect. Click on	underlined text to edit se	ttings.
Object	Scope matches	Name matches	
🖌 📑 Databases where	System or User	Any	
🖌 🐻 Tables where	System or User	Any	
🖌 🐻 Views where	System or User	Any	
Functions where	System or User	Any	=
🖌 🐻 All Synonyms

Collect SQL Server permissions for: All Server objects, Database S Stored Procedures All System and User Database All System and User Table: All System and User Views All System and User Views All System and User Funct All System All System and User Funct All System All Sys	s s ions	cedures and Extended	
	Back Next >	Cancel	elp

- 2. For those objects that have scope options, click the text in the **Scope matches** column, and select the appropriate option (User, System, System, or User).
- 3. For those objects that have naming options, click the text in the **Name matches** column, and a new window opens with the following options:
 - In the first part of the window, select the elements you want to move to the Selected list, and then click Add. You can
 remove the added elements from the list by selecting the element and clicking Remove.
 - On the Names matching box, select Any if you want to include all elements names in your snapshot.
 - If you want to specify strings that your filter will use to match the names of your databases, click Like to enable new options on the Name matching box. You can search for a specific element by typing a specific string in the Enter match string field (you can use wildcards), and then click Add. The Match strings field added strings. You can also remove strings from this box by selecting the string and clicking Remove.

Databases w	here		×
Select Dat	abases		
Specific Dat	abases can be selected f	for data collection.	
Available Da	atabases:		Selected Databases:
master model msdb ReportServe ReportServe SQLsecure tempdb	er erTempDB	Add > < Remove	
Names mat	ching		
Any	Enter match string (wil	dcards allowed):	
🔿 Like			Add
	Match strings:		
			Remove
			OK Cancel

- SQL Secure displays at the bottom section of this window a summary of all selected objects and their specified settings.
 Click Next to go to Schedule Snapshots.

When you are selecting objects to audit, be aware that you need to include all the objects your policies need to appropriately assess security risks. Δ
