

How to manage the Auto Registration Options

If you want to register all SQL Server instances every time new ones are discovered, SQL Elements allows you to automatically register them as they are continuously discovered. This option also lets you to choose which SQL Server editions you want to exclude from auto registration.

You can access the Auto Registration Options from the following views:

- Discovered instances - click **Auto Registration Options** on the actions items bar.
- Dashboard - click **Auto-Registration** on the Status sidebar.
- Administration tab - click **Auto Registration Options** located on the **Discovery** section.

Below you can see the sections where you can find this option:

SQL Elements does not register instances that were discovered before turning on the **Automatic Instance registration** option and does not register more instances than the number available for your license.

The Auto Registration Options window opens. Select **Enable Automatic Registration of newly discovered SQL Server instances** . On this window SQL Elements allows you to exclude the following editions:

- Enterprise
- Web
- Business Intelligence
- Developer
- Standard
- Express

Additionally, you can select **Others** when you only want the previous options to be taken into account for registration and you want to exclude any other editions.

Choose **Unknown editions** to exclude registering those SQL Server instances that SQL Elements can not connect to.

Auto Registration Options

☒ Enable Automatic Registration of newly discovered SQL Server instances

Exclude instances running the following editions from auto registration

☐ Enterprise

☐ Business Intelligence

☐ Standard

☐ Web

☐ Developer

☐ Express

☐ Others

☐ Unknown editions (usually means we couldn't connect to SQL Server)

SAVE

CANCEL

When you enable this option, SQL Elements automatically registers newly discovered instances but it does not assign them owner, location, or any other tags; additionally, they are all registered using SQL Elements service credentials. You can later add or change this information individually from the [Editing properties](#) window or by editing several instances at once on the **Instances** view (Managed and SQL Licensing views), for more information refer to [Managed instances](#).

**Tip**

If you want to get the latest discovered instances, you can trigger the instance discovery job by clicking **Discover instances** on the same section
