Key new features in 1.2

Auto Refresh

An auto-refresh option feature has been added that enables users to view the latest information on Instances, Health Checks Recommendations, and general information on all SQL Elements tabs. The interval for this auto-refresh option can be customized by following these instructions.

Discovery Instances options

When using the option to **Discover instances** on demand in the Discovered tab, users can now select one or the two of the following methods for discovery:

- Discover Instances Browser Service - to discover all available SQL Server instances available within the local network
- Discover Instances Odbc - to get the list of SQL Server instances from the system's registry data
