

Welcome to SQL Diagnostic Manager

SQL Diagnostic Manager is a powerful performance monitoring and diagnostics solution that proactively alerts administrators to health, performance and availability problems within the SQL Server environment. SQL Diagnostic Manager now integrates with the IDERA Dashboard, a common technology framework, designed to support the IDERA product suite. Users are able to obtain an overview of the status of their SQL Servers and hosted databases all in a consolidated view and navigate to individual product dashboards for details. The IDERA Dashboard provides a central set of services for managing users, product registry, instance registry, aggregated alerts across IDERA applications, a central web server, and tags for grouping instances. For additional information, see [Navigate the IDERA Dashboard](#).

To get started, see the following topics for more information:

- [Upgrade to this build of SQL Diagnostic Manager](#)
- [Configure SQL Diagnostic Manager](#)
- [Migrate your SQL Diagnostic Manager installation](#)

SQL Diagnostic Manager for SQL Server performance monitoring, alerting, and diagnostics for SQL Server.
