

Configuration wizard - SQLcompliance Agent Service Account window

The SQL Compliance Manager Agent Service Account window of the Configuration wizard is available when you choose to deploy the SQL Compliance Manager Agent now, and allows you to specify the credentials of the account under which the SQL Compliance Manager Agent Service runs. The SQL Compliance Manager Agent Service uses this account to stop and start SQL Server traces, execute stored procedures, manage trace files, and communicate with the Collection Server. Ensure you specify a valid Windows account that has SQL Server System Administrator privileges on the target SQL Server instance as well as read and write access to the specified trace directory.

Type the account name and password, confirm the password, and then click **Next**.

The screenshot shows a window titled "SQLcm Configuration Wizard - Add Server". On the left is a blue sidebar with a server icon. The main area has the title "SQLcompliance Agent Service Account" and a description: "Specify the service options. This account needs to be given SQL Server Administrator privileges on the registered SQL Server." Below this is a section labeled "SQLcompliance Agent Service Account:" containing three input fields: "Login account", "Password :", and "Confirm password:". A note below the fields states: "Note: The login specified for the SQLcompliance Agent service account needs to be a valid domain account with appropriate permissions for creating traces and stored procedures on the registered SQL Server." At the bottom are three buttons: "Previous", "Next" (which is highlighted with a blue border), and "Cancel".
