## **Capture Audit Snapshot window**

The Capture Audit Snapshot window allows you to manually capture an audit snapshot for all registered SQL Server instances or a specific instance. This option provides on-demand configuration data for auditing diagnostics. Audit snapshots include current audit settings for the registered SQL Server instances and audited databases. Captured snapshots are listed on the **Change Log** tab.

File Edit View	Auditing Alerting Agent Tools Help
New - Explore Act	Enable Auditing Disable Auditing
	Archive and Retention
	Collect Audit Data
	Capture Audit Snapshot
	Audit Snapshot Preferences Login Filter Options
	Collection Server Status Configure Repository Databases
	Import Sensitive Columns from CSV.

Select the type of audit snapshot you want to capture, and then click OK.

If you want to capture audit snapshots on a routine basis, consider scheduling snapshots.
