

View operations status summary

The Operations status summary displays a green success icon if the most recent backup or restore operation for each of the databases in the group or instance have been completed with success. When a failed operation is followed by a successful operation on the same database, the status is given as success. The number of successes and errors noted in the Operation Status Summary will always add to the number of databases in the group or instance.

SQL **safe** is a high-performance backup and recovery solution for your SQL Servers. [Learn more](#) > >
