

# Virtual Database CLI Commands

SQL Safe provides you with CLI commands to help you manually create virtual databases.

To perform operations use the following commands:

Commands	Description
SQLvdbCmd <action> [options]	Perform an action.
SQLvdbCmd help <action>	Display detailed help for an action.
SQLvdbCmd -ArgsFile <filename>	Perform the action defined within an argument file.

Where:

Action	Description
<action>	A keyword that tells SQLsafe what to do.
<filename>	Specifies the file that contains command line arguments.

When you use the *sqlvdbcmd* command, the following actions can be performed:

Action	Description
<a href="#">Create</a>	Create a new virtual database.
<a href="#">Remove</a>	Delete a virtual database.
<a href="#">Cleanup</a>	Cleanup unused virtual database temporary files.
<a href="#">EncryptWindowsPassword</a>	Encrypt plain-text password for Windows logins.
<a href="#">EncryptSqlPassword</a>	Encrypt plain-text password for SQL Server logins.
<a href="#">EncryptRestorePassword</a>	Encrypt plain-text password for encrypted restores.
<a href="#">Map</a>	Generate maps (for InstantRestore or SQL virtual database).
<a href="#">Help</a>	Display more detailed help.

For detailed descriptions and available options, see the CLI Help (*SQLvdbCmd help*).
