# Amazon Settings

To specify the Amazon cloud settings to be used through the different backups and restores, go to the **Cloud Settings** tab of the **Configure General Preferences** option from the **Administratio** tab.

In this section, you can specify following default settings:

- **Access Key** - specify the access key generated in your security credentials of your Amazon S3 web console. For more information, click here.
- **Secret Key** - specify the secret key generated in your security credentials of your Amazon S3 web console. For more information, click here.
- **Region** - select the region where your information will be stored. You can find more information about these regions here.
- **Bucket Name** - define the name of the Amazon S3 bucket where your backup will be stored.
- **File Size** - determine the minimal parts in bytes of the backup file sent to the bucket simultaneously. The minimal value is 1000000 bytes (1,000,000 bytes).

> ⊘ When Amazon cloud settings are set in the preferences, they can be used in backup and restore operations.
