

Manage health checks - Database Backup is not Current

The **Database backup is not current** health check alerts you when the indicated database does not have a current backup file. Click **Configure** in the Manage Health Checks window, and IDERA SQL Inventory Manager displays the Update Health Check - Database Backup is not Current window.

Make the appropriate changes, and then click **Save**.

 **Tips**

Currently the Database backup is not current alert is displayed when the database backup meets either one of these conditions:

1. No differential backup in 0 days or more (Warning Alert)
2. No full backup in 7 days or more (Critical Alert)

You will not see an alert on the dashboard for Database backup is not current for excluded databases.

Update Health Check - Database Backup is not Current

Set the # of days to check for the backup alerts:
Warning: 7 days (Default) Critical: 7 days (Default)

You can also elect to exclude Databases from this alert by selecting and moving the database from Available Databases to Excluded Databases Lists.

Filter available database list by tag

☐ Development
☐ Test
☐ Integration
☐ Production
☐ Disaster Recovery
