

# Known issues

Idera strives to ensure our products provide quality solutions for your SQL Server needs. The following known issues are described in this section. If you need further assistance with any issue, please contact [Support \(www.idera.com/support\)](http://www.idera.com/support).

## Installation and configuration issues

### SQL Admin Toolset no longer supports Itanium

Idera has discontinued Itanium support in SQL Admin Toolset version 1.6 and later. However, versions 1.5 and earlier will continue to operate with Itanium and support for those versions is available through November 2012. For more information, see the [product requirements](#).

## Known issues in this version

There are no new known issues in this version.

## Previous known issues

### Linked Server Copy

Local computer accounts are not supported. If you create a linked server and map the security locally, the linked server is created, but you receive an error stating that it is not a valid login.

### Database Mover

When copying a large database (10GB or greater) to another server, Database Mover may experience performance issues.

### Server Configuration

Offers limited keyboard browsing. When browsing multiple servers, using the directional arrow keys will highlight a server, but not update the server details. Press Enter to refresh the screen and display the correct server information.

SQL [Admin Toolset](#) delivers 24 essential administration tools. [Learn more >>](#)
