

# New features and fixed issues

The IDERA Dashboard provides the following new features and fixed issues.

## 3.0 New features

### Improved IDERA Dashboard user interface

The IDERA Dashboard features a new look and feel. Some changes include:

- **Navigation.** The primary navigation moves away from product-specific tabs to a dropdown selection in the header adjacent to the IDERA logo.
- **Administration menu.** Common tasks previously accessed only on the Administration tab now are available from a new **Administration** menu on the right side of the menu bar.

### Manage tags across products from the IDERA Dashboard

IDERA Dashboard now lets users create global tags shared across all registered IDERA products. Import functionality allows you to import a tag from a supported product such as SQL BI Manager 2.1 to IDERA Dashboard so that it can be used by other products, when available. This feature is still being developed by Diagnostic Manager and Inventory Manager.

### Register and migrate IDERA products using IDERA Dashboards

Users can register a product manually using CWF's Manage Product page. The products that can be registered this way are [SQLBI \(2.2\)](#), [SQLdm \(10.1\)](#), [SQLInventoryManager \(2.3\)](#).

Ability to migrate product to a different Idera Dashboard. This feature will be supported by each product once they are onboarded/integrated with Idera Dashboard version 3.0.1. This is not available yet.

### Windows authentication support

Support for Windows Authentication - allows a user to connect to the IDERA Dashboard using their Windows Credentials and bypass entering user name and password for IDERA Dashboard. This is available for SQL Business Intelligence Manager 2.1 and SQL Inventory Manager 2.2. However, the other products will require integration before this feature works.

## 3.0 Fixed issues

The IDERA Dashboard 3.0 fixed the following issues:

- Flickering issue with the user management
- Support for special characters
- Clean up uninstall process
- Ability to add Group for user management
- Ability to add users from trusted domain

## 2.2 New Features

### Introduces the Alert tab

The IDERA Dashboard 2.2 now includes the Alerts tab, which provides a list of all the current alerts occurring in your registered product(s).

### Includes filters on the Details Views tab

The IDERA Dashboard 2.2 Details Views now includes filtering options to view monitored SQL Server instance details by product.

### Offers many new widgets

The IDERA Dashboard 2.2 introduces the following new widgets that display information across all registered IDERA products in your environment:

- **Alerts by Category.** Displays the alert categories and counts.
- **Alert Counts.** Displays a list of alerts by severity.
- **Alert List.** Displays a summary of alerts.
- **Products by Alerts.** Displays a list of the registered IDERA products and total alerts by severity.
- **Top Alerts by Metric.** Displays a list of the top alerts.
- **Top Instances by Alert Counts.** Displays a summary of all alerts by instances.

## 2.2 Fixed Issues

The IDERA Dashboard 2.2 includes the following fixed issues:

- The Manage Users dialog did not properly show Display Names.
- Updated the IDERA Dashboard Login window.
- Product registration removal failed to remove all of the appropriate files.
- The IDERA Web Application Service did not properly restart when a machine restarted.
- The tabs did not properly highlight to indicate the active view.
- Allow usage of entire screen
- Fixed the Diffie-Hellman public key error in newer versions of Chrome and Firefox.

**IDERA Dashboard** provides an integrated user experience for the IDERA products in your environment.
