

New features and fixed issues

IDERA SQL Compliance Manager provides the following new features and fixed issues.

IDERA, Inc. customers are solely responsible for ensuring compliance with the laws and standards affecting their business. IDERA, Inc. does not represent that its products or services ensure that customer is in compliance with any law. It is the responsibility of the customer to obtain legal, accounting, or audit counsel as to the necessary business practices and actions to comply with such laws.

6.3 New Features

Security Enhancements

Essential Security Permissions for SQLCM to Function

SQL Compliance Manager 6.3 release delivers security permissions based on the least privilege principle (as opposed to permissions based on standard user roles such as sysadmin) to further enhance the data security per user within the product.

6.3 Fixed Issues

- Fixed an issue where **DDL events** were not being captured for server-level privilege users configured through a domain group.
- Resolved the issue where the **Regulatory Compliance Check** report was showing "No" at server-level for PCI DSS guideline.
- Fixed an issue where the **IP Address Auditing** checkbox was unchecked after importing an exported audit setting file.
- Addressed an issue with **Audit Events** not appearing on SQLCM console when CM repo was hosted on a Case Sensitive SQL instance.
- Solved the issue of multiple alerts being logged for a single event.
 - The number of Data and Event alerts is consistent with the number of audit events generated.
 - The email alerts have been improved with the appropriate event description.
