

Edit Data Alert Rule wizard - Alert Actions tab

The Alert Actions tab of the Edit Data Alert Rule wizard allows you to change the action you want this alert rule to perform when an audited data matches the specified criteria. Depending on the actions you select, IDERA SQL Compliance Manager will write an alert message to the application event log and email it to a specific email address or distribution list. You can use the default alert message or customize it to display the information you need most.

To successfully use email notification, ensure SQL Compliance Manager is configured to connect to your mail server. For more information, see the [Configure Email Settings](#) window.

Edit Data Alert Rule

Alert Actions
Select the action to be taken when SQL Server data matches this rule.

Alert Actions

- ☐ Email Notification
- ☐ Event Log Entry
- ☒ SNMP Trap

Edit rule details (click on an underlined value to edit)

Generate a Medium alert
when a **Sensitive Column** is accessed
on any SQL Server
Send an alert message to
specified network management console

Available actions

Select alert action

Allows you to select whether you want an alert message to be generated when this alert is triggered. You can configure an alert message to be written to the application event log and emailed to a specific address or distribution list. SQL Compliance Manager uses the same alert message content for the event log entry and email notification.

Edit rule details

Allows you to specify one or more of the following attributes, depending on the alert action you selected:

- Content of the alert message
- Type of event log entry that should be written (Warning, Error, Information)
- Addresses to which the alert message should be emailed

The rule details pane also allows you to change your specified alert rule criteria at any time as you create your new alert rule. As you specify criteria using the Edit Data Alert Rule wizard, the rule details grows to include these additional settings. To edit previously set criteria, click the corresponding setting.
