

## Edit Event Filter wizard - Finish Event Filter tab

Use the filter details pane to review your changes, and then click **Finish**. When you finish this wizard, IDERA SQL Compliance Manager applies your changes.

**Edit Event Filter**

**Finish Event Filter**  
This window allows you to specify the general properties for this filter.

Specify a name for this filter  
New Filter

Specify a description for this filter

☒ Enable this filter now

Review filter details (click on an underlined value to edit)  
Filter all DML events  
on any SQL Server  
and database master  
where Login Name like 'sa'

< Back   Next >   **Finish**   Cancel

## Available actions

### Specify filter name

Allows you to name your event filter. Consider using a unique name that reflects the purpose of the rule.

### Specify filter description

Allows you to provide a description for this event filter. Consider including detailed information that can help you diagnose issues later.

### Enable filter now

Indicates that you want SQL Compliance Manager to begin filtering events using this rule criteria immediately after you finish creating the rule. By default, all alert rules are enabled upon creation.

### Review filter details

Allows you to change your specified event filter rule criteria before applying your edits. To edit previously set criteria, click the corresponding setting.
