## **Configure Table Auditing window**

The Configure Table Auditing window allows you to choose which columns you want to audit from the selected table.

## **Available actions**

## Specify how many rows of data to include in the audit stream

Specify how many rows of data you want to capture for each audited column. A single DML transaction can contain multiple rows of data, depending on the modification performed. Consider selecting a low number of rows until you can identify exactly which data you need to audit from the transaction.

## Select the columns to audit

Choose whether you want to **Audit All Columns** or **Audit Selected Columns**. You can select any column that does not contain BLOB data.
