

How to install SQL Compliance Manager

Pre -Installation

Before installing IDERA SQL Compliance Manager, consider the following best practices:

- Ensure you review the [hardware](#), [software](#), [permissions](#), and [port](#) requirements.
- Decide whether you should [install the Collection Server on a dedicated SQL Server instance](#).
- A SQL Server instance to host the IDERA SQL CM and the IDERA Dashboard repository databases.
- Have valid Service Account credentials for the IDERA Services.
- **If you plan to audit instances running SQL Server 2005 or later**, install the Collection Server on a computer hosting the highest version of SQL Server running in your environment. For example, to accept event data from audited instances running SQL Server 2012, the Repository databases must reside on a SQL Server 2012 or higher instance.

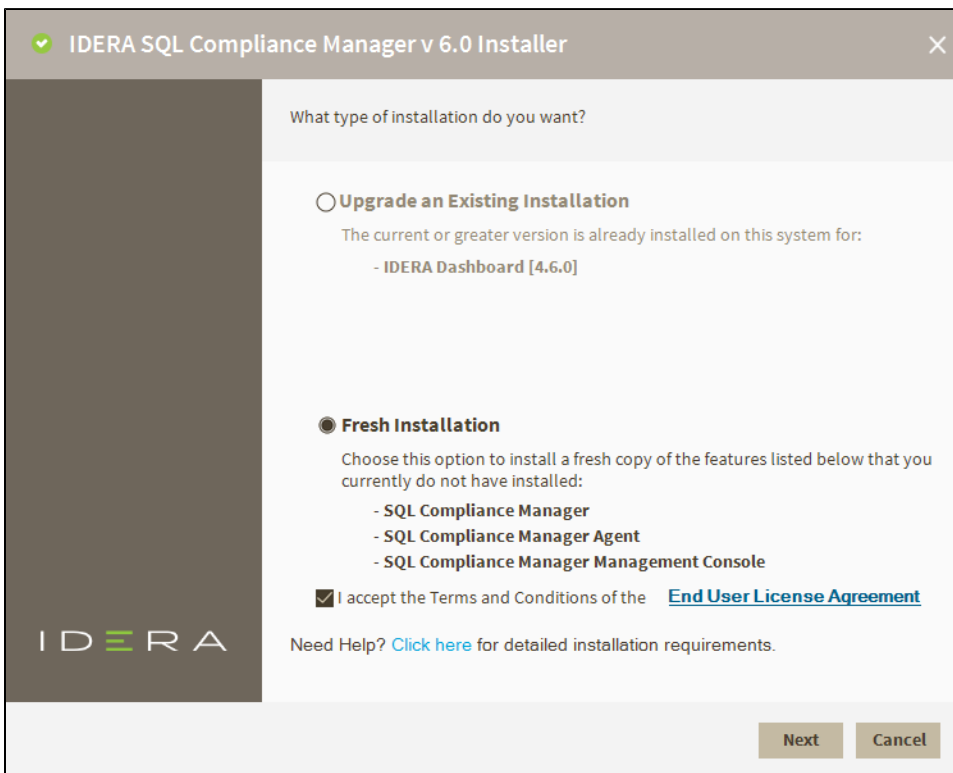

By default, SQL Compliance Manager installs with a trial license. For more information about trial licenses or upgrading your license, see [Licensing](#).

 IDERA SQL Compliance Manager versions 4.5 and older. For installations of SQL Compliance Manager 5.0 and newer, including the IDERA Dashboard, see [How to install SQL Compliance Manager and the IDERA Dashboard](#).

Fresh Installation

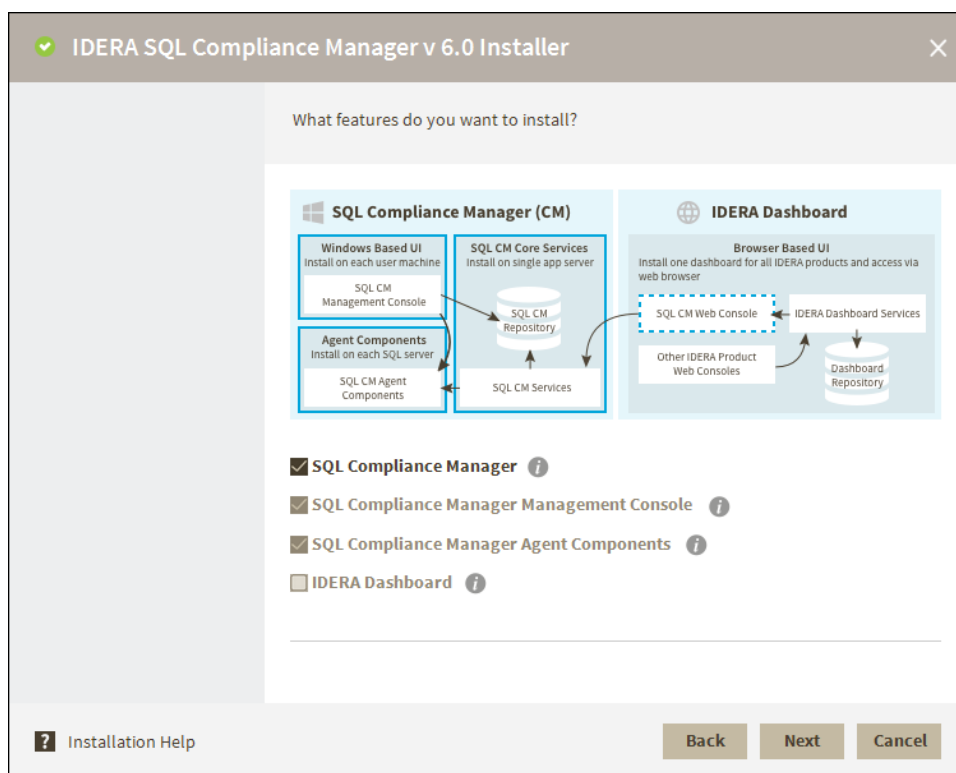

Install Features

1. Select the **Fresh Installation** option.

2. Accept the terms and conditions of the EULA and click **Next**.
 - a. Click the link to open the EULA dialog to review it in detail.
3. Select the features you want to install and click **Next**.
 - a. SQL Compliance Manager - Installs the collection service, the management console, and the agent components.
 - b. SQL Compliance Manager Management Console - installs the application only.
 - c. SQL Compliance Manager Agent Components - installs the agent service and its required components only.

- d. IDERA Dashboard - installs the IDERA Dashboard that can be accessed via web console to access SQL CM.

Dashboard Registration

Select if you want to register SQL CM with an existing IDERA Dashboard.

Register the IDERA Dashboard locally - type in the Dashboard Location where you want to install the IDERA Dashboard and type in your Administrator Credentials.

1. Choose whether you want to register SQL CM to an existing IDERA Dashboard. If you choose **Yes**, follow the steps below. If you choose **No**, click **Next**.

Installation Directory

1. Type in or browse the installation folder where you want to install SQL CM.
2. Type in a Display Name to be shown on the IDERA dashboard for the current installation.

The screenshot shows the 'IDERA SQL Compliance Manager v 6.0 Installer' window. On the left is a vertical navigation pane with steps: 1. Install Features (checked), 2. Dashboard Registration (checked), 3. Installation Directory (selected), 4. Repositories, 5. Trace Directory, 6. Service Account, 7. Summary, and 8. Install. The main area is titled 'Where do you want SQL Compliance Manager installed?' and 'SQL Compliance Manager'. It contains two input fields: 'Installation Folder:' with the text 'C:\Program Files\IDERA\SQLcompliance' and a 'Browse' button, and 'Display Name:' with an information icon and the placeholder text 'Enter SQL Compliance Manager Display Name'. At the bottom are buttons for '? Installation Help', 'Back', 'Next', and 'Cancel'.

Repositories

If you want to enable a Clustered Environment. Select the checkbox and choose between an **Active Node** or a **Passive Node** to create your repositories.

Select the authentication method. When selecting **Use Microsoft SQL Server Authentication**, a screen prompts you to add the Username and Password.

The screenshot shows the 'IDERA SQL Compliance Manager v 6.0 Installer' window. On the left is a vertical list of steps: 1. Install Features, 2. Dashboard Registration, 3. Installation, 4. Repositories (highlighted with a blue circle), 5. Trace Directory, 6. Service Accounts, 7. Summary, and 8. Install. The main area of the installer is currently on the 'Repos' step, asking 'Do you want to enable a Clustered Environment? What Instance and Authentication do you want to use to create repositories?'. There is a checkbox for 'Enable Clustered Environment' which is unchecked. A modal dialog titled 'Microsoft SQL Server Authentication' is open in the foreground. It contains the text 'This login is for SQL Compliance Manager and IDERA Dashboard repositories.' followed by two input fields: 'Username:' and 'Password:'. At the bottom of the dialog are 'Cancel' and 'Save' buttons. At the bottom of the installer window, there is a bar with 'Installation Help' (with a question mark icon), a 'Test Connections' button, and 'Back', 'Next', and 'Cancel' buttons.

Trace Directory

Select where you want to store the audit information obtained with the **SQLCompliance Agents** before it processes the information and sends it into the Repositories.

Where do you want the SQL Compliance Manager Collection Trace Directory?

Collection Service Trace Directory Folder:

C:\Program Files\IDERA\SQLcompliance\CollectionServerTraceFiles

Browse

The Collection Service temporarily stores audit information received from the SQLcompliance Agents until it can process the information and load it into the Repository.

NOTE: If this is a cluster installation, specify a trace directory on a shared disk in the virtual instance's cluster group.

7

Password

Entering passwords with special characters such as " / \ [] : ; | = , + * ? < > generates a failure with the installation, canceling and not completing the product installation.

Summary

Review the stated parameters before the installation.

The screenshot shows the 'IDERA SQL Compliance Manager v 6.0 Installer' window. On the left is a navigation pane with steps: Install Features, Dashboard Registration, Installation Directory, Repositories, Trace Directory, Service Account, **Summary** (highlighted with a '7'), and Install (highlighted with an '8'). The main area displays the 'Summary' step, which includes a 'Please review the following settings, then click Install' message. Below this, the 'SQL Compliance Manager' settings are listed: Install Location (C:\Program Files\IDERA\SQLcompliance), SQL Server Instance (DESKTOP-...), Database Name (SQLcompliance), and Authentication Type (Windows: DESKTOP-...). The 'Service Account' section states that the services will use Windows credentials specified below, with the Domain\Username set to DESKTOP-... At the bottom, there is an 'Installation Help' link and three buttons: 'Back', 'Install', and 'Cancel'.

Press the **Install** button to start the installation.

The SQL Compliance Manager installer detects if the local machine has an older version of the SQL Server 2012 Native Client installed and if needed, SQL CM upgrades the Native Client to the latest version and proceeds with the installation. If no Native Client is installed on a server, then SQL CM installs the latest Native Client version and proceeds with the installation.
