Finish the Reports deployment

Review the provided summary, and then click **Finish**. When you finish this wizard, IDERA SQL Secure installs the corresponding RDL files in the specified virtual directory on your Report Server.

If you want to change a setting now, click **Back** to return to the appropriate window. You can also change your deployment settings later through the Report Manager interface installed with Microsoft Reporting Services.

SQL Secure tells you who has access to what on your SQL Server databases. Learn more > >
