

Change email notification

The **Email** tab allows you to configure the way email notifications are sent after a snapshot is collected. You can select to have email notifications sent after a snapshot is collected successfully, or only if there are warnings or errors. You can also select to have email notifications sent depending on the level of the security risks discovered.

Once you have configured when notifications are sent, enter the email address to send notifications to in the **Email Recipient** field. To enter multiple email addresses, separate each address with a semi-colon.

 If you do not want to receive email notifications for snapshot status or security finding, unchecked the associated option.

SQL Secure tells you who has access to what on your SQL Server databases. [Learn more > >](#)
