

Navigation pane

The Navigation pane displays on the left side of the SQLDM Console as shown in the following image:

Servers

The MY VIEWS section helps you organize your SQL Server instances by status and includes any custom views you have set up. The Tags section allows you to manage tags or key words that you can use to quickly find the appropriate monitored SQL Server instances, custom counters, and permissions. The Servers section lists the SQL Server instances contained in the currently selected view.

To view all registered instances, select **All Servers** from the MY VIEWS list, review the page [Monitor multiple SQL Server instances](#).
