## About Precise portlets

The Precise Custom Portal lets you determine which portlets to view, what information to display, and how to display that information. All information displayed in the Precise portlets is derived from Precise data.

Changing a portlet title to a logical name helps you keep track of the information that is most significant to you and your organization. Additional information regarding the Precise portlets is available in the Precise product suite documentation.

The Precise Custom Portal's 'Add a Portlet' menu offers the following predefined portlets, categorized as they appear in the table below:
