

SQL Enterprise Job Manager allows you to see what SQL Server instances in your environment cannot be contacted. To view this information you can go to:

- ## How do you view SQL Server instances not contacted on the Dashboard tab?

- Go to the Summary section located on the right side of the **Dashboard** tab where you can find the number of **Instances not contacted** in your environment. Click this option and SQL Enterprise Job Manager directs you to the **Instances** tab with the list of your instances filtered by those status that imply that they could not be contacted: Unknown, Connection Failure, Authentication Failure, and Error.
- Alternatively, you can go to the instances list located at the bottom section of the **Dashboard** tab. Click the Status header to have your instances ordered by status.

How do you view SQL Server instances not contacted on the Instances tab?

To view what SQL Server instances cannot be contacted, you can also go to the **Instances** tab. On the filtering section of this tab, go to the **Status** filter and select those status that represent instances that could not be contacted such as: Unknown, Connection Failure, Authentication Failure, and/or Error.
