

Enhanced Logging

Activate enhanced logging for the Idera - Collector service in SQL Workload Analysis, following these steps:

1. Stop the **Idera - Collector** and the **Idera - Framework**

2. Change the configuration of properties file:

- a. Locate the following paths:

`<<Idera SQLWA InstallationDir>>\deploy\etc\perflog.properties`

`<<Idera SQLWA InstallationDir>>\etc\perflog.properties`

- b. By default, the first line would be: `logger.performanceLogger=FATAL` ,
`requestAppender`

- c. Change the line, as follows: `logger.performanceLogger=DEBUG` , `requestAppender`

3. Start the **Idera - Collector** and the **Idera - Framework**

The Collector perflogs are created at: `<<Idera SQLWA InstallationDir>>\deploy\var\logs`

While the Framework JMS perflogs: `<<Idera SQLWA InstallationDir>>\tomcat\logs`

 Wait half an hour or so to have actionable insights from the logs.

4. Stop the **Idera - Collector** and the **Idera - Framework**

5. Revert the Perflogs configuration and restart services.
