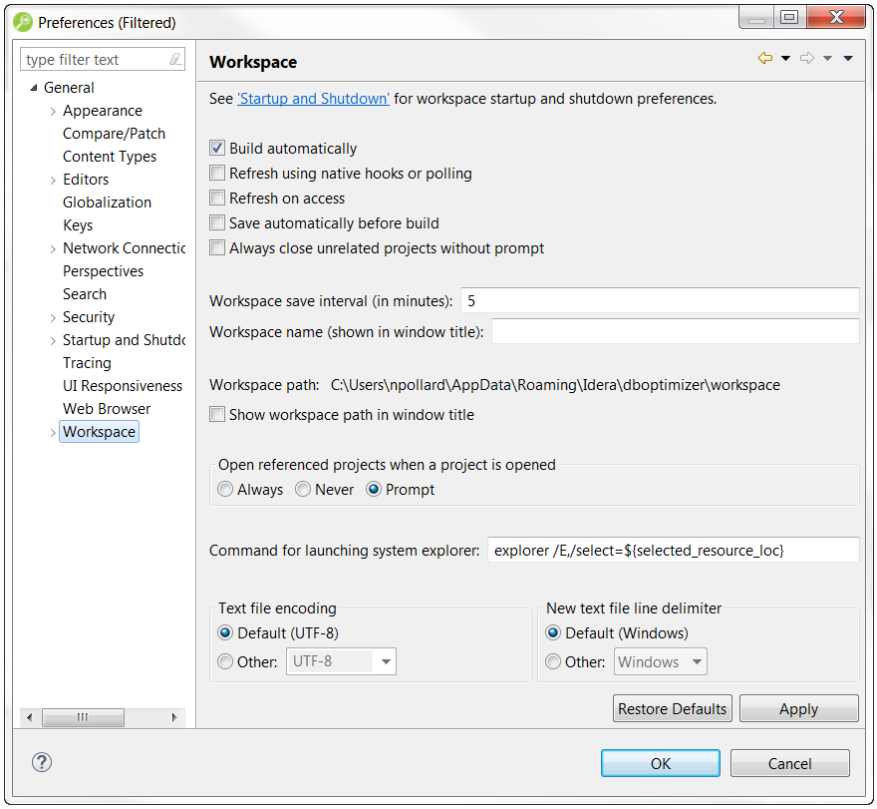
Specify File Encoding preferences

The Workspace panel provides options for Unicode support in SQL files.

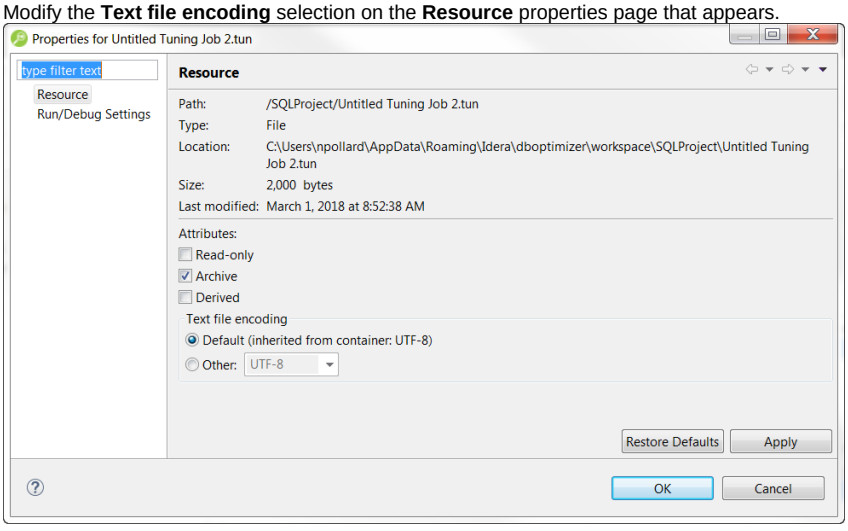
Select **Preferences > General**, expand **General** and then click **Workspace** in the tree.



The default encoding for text files on Windows platforms is Cp1252. You can change Unicode support in from file to file using the Text File Encoding options available on the Workspace panel.

To change text file encoding in the development environment:

1. Select **Preferences > General > Workspace** and click the **Other** option under **Text File Encoding**.
2. Use the drop down menu and select an encoding mode from the list provided.
3. Click **Apply** to save your changes.

To change text file encoding on a specific, folder, or project:


1. Right-click on the file, folder or project that you want to modify and choose **Properties**.
2. Modify the **Text file encoding** selection on the **Resource** properties page that appears.
