# Revert to an old version of a file

The **Replace With > Local History** command provides you with the ability to revert a SQL file back to a previously recorded local history.

To replace the contents of a file with the contents of a previously saved version via local history:

1. Right-click the SQL Editor and select **Replace With > Local History** from the shortcut menu.
   The **Replace from Local History** dialog appears.

2. In the **Local History of ...** panel, select a previously recorded version of the file by clicking the appropriate timestamp.
3. Click **Replace**.

The contents of the currently-opened file revert to the contents of the file at the history point you selected in the dialog.

Alternatively, from the shortcut menu, select **Replace With > Previous from Local History** to replace the contents of the file with DB Optimizer's last recorded history point.
