

# Create a new tuning job

You can create a new tuning job via the **File > New > Tuning Job** command, or by importing statements directly from profiling. The New Tuning Job icon is also available on the Toolbar.

## To create a new tuning job via the Menu or Icon command

Select **File > New > Tuning Job**, or click the **New Tuning Job** icon on the Toolbar. Tuning opens.

You can now proceed to set up the parameters of the new job.

## To create a new tuning job from profiling

After you have run a profiling session, in profiling's **Profiling Details** tab, select one or more statements, right-click, and select Tune from the context menu. Tuning opens, pre-populated with parameters based on the statements you selected.

## To open an existing tuning job

Navigate to the **SQL Project** tab and double-click the name of the existing tuning job.

## To name a job, save it

Ensure you specify a meaningful name that identifies the job in other views and dialogs. You can save the job by selecting **File > Save** or **File > Save All** from the Menu bar. Once a job is saved, it is added to the SQL Project view.
