

Register data sources

When DB Optimizer is started, it prompts you to discover data source catalogs that have been created by any previously-installed IDERA products (DBArtisan, Rapid SQL, etc.), or other instances of DB Optimizer.

Additionally, the system scans your machine for the client software of all supported third-party DBMS platforms (TOAD, Eclipse Data Tools Platform, etc.). These data sources are automatically added to the data source catalog.

To manually initiate the scan later

1. Click the Discover Data Sources icon  at the top of Data Source Explorer. The Discover Data Sources dialog appears.

2. Choose the type of data sources for which you want to scan, and then click **Next**. The wizard automatically returns all data sources it finds on your machine based on the criteria you specified.
3. Choose the data sources you want to add to the DB Optimizer environment, and then click **Finish**.

Data Source Explorer automatically populates with the new data source selections.

 To add data sources manually, right-click **Managed Data Sources** in the Data Source Explorer tree, select **New > Data Source**, and then enter the connectivity parameters as prompted.

For additional information on data source connection parameters, see [DBMS connection parameters by platform](#).

Once registered, the data source appears in the Data Source Explorer view. If you have created more than one workspace, they all share the same data source catalog.

Once a data source is registered, the connection parameters are stored locally. In some cases, a user ID and password are required to connect to a registered data source. DB Optimizer can encrypt and save user IDs and passwords to connect automatically.

 In some cases, older versions of DB Optimizer and DBArtisan/Rapid SQL are not compatible with this version of DB Optimizer, and the methods listed above will not import these older data source catalogs. If you are experiencing difficulties, you can import the old data sources via the Windows registry by selecting **File > Import > IDERA > Data Sources > Previously Registered IDERA Data Sources (Windows Registry)**.
