

Specify Data Sources preferences

When you add a data source to your list of Managed Data Sources in the Data Source Explorer, DB Optimizer stores the definition and metadata for the data source in the location you specify here. For information on adding data sources, see [Register data sources](#).

To specify Data Sources preferences

1. From the **Preferences** menu, select **Data Sources**. The **DataSources** pane appears.

Connectivity

☐ Enable Oracle OCI driver

Note: This preference will enable use of the Oracle OCI driver installed on the local machine. Additionally, this will cause the Oracle Thin JDBC driver to use the installed Oracle client libraries. Please ensure your Oracle client installation is compatible with your Oracle data sources before enabling this preference. You may need to restart the application for this change to take effect.
