

# Eclipse plugin extensions reference

DB Change Manager publishes extensions that can be implemented as plugins to customize the application.

The **Notifications extension** helps you code a plugin for DB Change Manager that implements any type of job execution notification required for your organization. DB Change Manager includes email notification by default, and you can code additional Java plugins to add to DB Change Manager.

The **Configuration Parameters extension** helps you code a plugin for DB Change Manager that adds additional configuration parameters and values for configuration standards, archive jobs, and comparisons. DB Change Manager includes plugins for standard configuration properties and version information, and you can code additional plugins that query data sources using Java JDBC for additional or environment-specific information.

To write Eclipse plugins, you need to have some experience coding in Java. For instructions, see:

- [Creating and implementing a notification plugin](#)
- [Creating and implementing a custom configuration plugin](#)
