

Notifying users about product upgrades in the IDERA Dashboard

 SQL Compliance Manager is ONLY compatible with IDERA Dashboard version 4.6 and with limited support.

The Send Notification to All Users widget of the Administration view lets you send a notification to all user accounts added to IDERA Dashboard. Use this feature to notify users about product upgrades and other issues affecting product use.

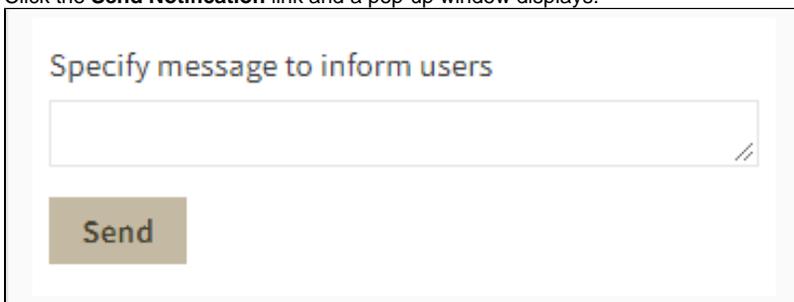

The screenshot shows the IDERA Dashboard Administration view. The navigation tabs are Overview, Details View, Alerts, and Administration. The Administration view is active, showing a grid of management options:

- Users:** Give users permission to use the IDERA Dashboard. Create, edit and delete users with the Manage Users action. [Manage Users](#)
- Instances:** The IDERA Dashboard tracks SQL Server instances discovered and managed by IDERA products. Use Manage Instances to view and manage this list. [Manage Instances](#)
- Products:** The IDERA Dashboard hosts products that register with the dashboard. Typically this is handled at the time the product is installed or uninstalled. The Manage Products option lets you view and manage the list of registered products. [Manage Products](#)
- Tags:** Tags can help you organize your managed instances and databases. Tags created and updated in IDERA Dashboard can be made available and used in other IDERA SQL products. Create, import, view, edit and delete tags and their associated instances and databases using the Manage Tags action. [Manage Tags](#)
- Configure Navigation Order:** Customize the order of the products on the navigation tab. [Customize Main Navigation Tab Order](#)
- Configure Dashboard Views:** Customize the objects that display on the Dashboard Views. [Customize DBA Dashboard](#)
- Send Notification to All Users:** Add a warning message to notify all users about product upgrades. [Send Notification](#)
- Licensing:** View license statuses for your IDERA SQL products using the Manage Licenses action. [Manage Licenses](#)

To send notification to all users:

1. Click the **Send Notification** link and a pop-up window displays.

The pop-up window titled "Specify message to inform users" contains a text input field and a "Send" button.

2. Type the message you want to send, and click **Send**.
