

Creating a new Job Chain

You can create new job chains from the following sections:

- **Overview** tab - click **Add Job Chain** in the top bar options of the **All Instances** section.
- **Jobs** tab - select **Job Chains** from the drop-down list of the **View By** section, then select **Add Job Chain** on the top right corner.

Remember that SQL Enterprise Job Manager allows you to branch Jobs with a Job Chain and merge two or more Job Chains to create a new one.

In the **Job Chain Wizard** you can define the following properties for your new Job Chain:

- [Job Chain General Specifications](#)
- [Root Job Schedules](#)
- [Job Chain Alerts](#)

Take into account that only Administrators and Guest-users can add new job chains.
