

Select policies to export

The **Policies** tab of the Export Wizard allows you to specify the policies you want to export to an XML file. You can also import these policies into a SQL Safe Backup.

You can select your policies from the following locations:

- **All Policies** - use this option to select a policy from all policies in your environment.
- **Backup Policies** - use this option to select a policy from all backup policies in your environment.
- **Log Shipping Policies** - use this option to select a policy from all log shipping policies in your environment.
- **Restore Policies** - use this option to select a policy from all restore policies in your environment.
- **Specific Policies** - use this option to select specific policies from all policies in your environment.

- Select the **Check All** box to select all policies in the list.
- Click **Refresh** to update the policies list.

Once you select the policies to export, click **NEXT** to [select a location to save your export file](#).
