

Database Chaining Enabled

The **Database Chaining Enabled** shows how all SQL Server instances with cross-database ownership chaining enabled.

Warning

This report does not apply to **Azure SQL Database** instances. In **Amazon RDS** instances, it allows for cross-database chaining via a Parameter option.

Recommendation

The **Cross-database chaining** security feature implies an increased security risk. Consider disabling it on all servers when it is not needed.

Getting Started

Follow these steps to create a report:

1. Select the Date, Policy, and Baseline options from the Report Settings box.
2. Click the **View Report** button to generate your report.

SQL Secure™
Assess and audit security risks and access rights

Database Chaining Enabled

Most current audit data as of Tuesday, September 13, 2022

There are no audited servers with cross database ownership chaining.

About: This report shows all SQL Server instances that have cross-database ownership chaining enabled.

Recommendation: Cross database ownership chaining poses an increased security risk. It is recommended that it be disabled on all servers where it is not needed.

APPENDIX: Audit Data

The following snapshots were used to generate this report. For complete information on what audit data was captured, check the filter settings and status of each snapshot.

SQL Server	Version	Audited On
	SQL Server 2016 v13.0.1601.5	6/15/2022 6:13:57 PM

Generated by  on 9/13/2022 7:59:07 AM
