How to install IDERA SQL Secure

This procedure guides you through a typical install of IDERA SQL Secure. A typical install sets up all SQL Secure components on the same computer. Use this procedure for first-time installs and evaluation installs.

0	Before you begin the installation process, ensure you have all permissions to create databases on SQL Server and review the product requirements.
()	SQL Secure installer does not support remote installation or installing the repository on Azure SQL Database instances or Amazon RDS for SQL Server instances.
(j	Installing the Repository on remote SQL Server instances is not supported.

Start the setup program

You can install SQL Secure on any computer that meets or exceeds the product requirements.

To start installing SQL Secure:

- 1. Log on with an administrator account to the computer on which you want to install SQL Secure.
- 2. Close all open applications.
- 3. Run Setup. exe in the root of the installation kit.
- 4. Click All Components under Install on the Idera SQL secure Quick Start window.

Choose where you want to install SQL Secure and who should use the product on this computer

You can use the default install location or specify a different location. For your first install, we recommend using the default location.

🛃 Idera SQL Secure x64 - Setup W	izard	×
	Destination Folder	
	Specify the location where you want to install the program files.	
	Install Idera SQL Secure x64 to:	
	C:\Program Files\Idera\SQLsecure\	
	Change	
	Install this application for:	
	 Anyone who uses this computer (All Users) 	
	○ Only for me (Current User)	
IDERA		
	< Back Next > Cancel	

To choose a different location:

• Click Change to navigate to the location you want to use, and then click Next.

To restrict access:

- 1. Choose whether you want any user (Anyone who uses this computer) or only the current user (Only for me) to access this application,
- 2. Click Next.

Choose the type of installation you want to perform

All Components

For your first install, we recommend that you select to install **All Components**. This option ensures that you install and configure all required SQL Secure components locally on the SQL Server computer hosting the Repository, so you can immediately begin using SQL Secure in your environment.

To perform a typical install, click All Components, and then click Next.

Console only or Repository and Services only

Alternatively, you can choose to install the **Console only** or the **Repository and Services only**. These options allow you to customize installation on each computer.

To install only the SQL Secure Console or the Repository and Services, select the appropriate option, and then click Next.

Choose which SQL Server instance you want to host the Repository database

Select the local SQL Server instance where the SQL Secure repository will be installed.

🛃 Idera SQL Secure x64 - Setup Wi	zard	\times	
	Install the SQLsecure Repository		
	Configure the installation options for the SQLsecure Repository		
	Designate a local SQL Server instance that will host the SQLsecure Repository. Use the provided field below or click Browse to see a list of all local Instances.		
	Local <u>SQL</u> Server instance:		
	(localdb)\MSSQLLocalDB V Browse		
	Cluster Installation		
	Connection Credentials:		
	You can use SQL Server authentication to create the Repository. By default, the Setup Wizard uses your Windows logon credentials.		
	Use Microsoft SQL Server Authentication Change

	< Back Next > Cancel		

To choose the instance where the repository will be installed:

- 1. Click **Browse** to access a new window where a list of all available instances, in your current domain and other trusted domains will be displayed. Select the SQL Server instance you want to use.
- 2. Click OK.

If you do not see your SQL Server instance in the list, enter the hostname and instance in the space provided.

To install on a cluster:

If you are installing on a Failover Cluster, check the Cluster Installation checkbox.

To specify the Connection Credentials:

By default, SQL Secure will connect to the selected SQL Server instance using the credentials of your current Windows login account. For your first install, we recommend using your current login account credentials.

To use a SQL Server login:

- 1. Click Use Microsoft SQL Server authentication. A new window for specifying the login credentials opens.
- 2. Specify the credentials of the login with sysadmin privileges on that instance, and then click OK.
- 3. Click Next.

Complete the install

Indicate that you are ready to complete your installation and apply the configurations you specified. If you want to make changes or review your installation settings, click **Back**.

To complete your install:

1. Click Install and wait until the installation process finishes.
