Policy Data

To configure where you want to save your policy data files of your policies, go to the **Policy Data** tab of the **Configure General Preferences** option from the **Administration** tab.

By default each backup agent stores policy data in its own installation path: <InstallPath>\PolicyData. You can change this path by typing your preferred location or by clicking **Browse** to find it.

After determining your policy data location changes, click **Save** to apply this new location.

SQL Safe is a high-performance backup and recovery solution for your SQL Servers. Learn more > >
