

# Administration tools

The IDERA SQL Admin Toolset contains the following administration tools:

## [Connection String](#)

Create connection strings in seconds by picking and choosing from the available options.

## [Database configuration](#)

Compare and edit configurations for one or more SQL Server databases.

## [Database Mover](#)

Move or copy databases and their associated logins within or between SQL Server instances.

## [Job Editor](#)

View and edit jobs across multiple SQL Server instances.

## [Job Mover](#)

Copy or move your jobs between SQL Servers.

## [Linked Server Copy](#)

Copy linked servers from one SQL Server instance to another.

## [Login Copy](#)

Synchronize logins across SQL Server instances by copying logins from one instance to another.

## [Multi Query](#)

Execute and manage queries across multiple SQL Server instances.

## [Partition Generator](#)

View existing partition information and generate new data partitions quickly and easily.

## [Quick Reindex](#)

Review index fragmentation and rebuild indexes on your SQL Server instances.

## [Server Configuration](#)

Compare and edit configurations for one or more SQL Server instances.

## [Table Pin](#)

View and manage the pinned status of your tables (*SQL Server 2000 and before only*).

## User Clone

Create a new SQL Server login using an existing login as a template.
