

## Policy Wizard - Select which resource checks you want to run before running the policy

The **Resource Check** tab allows you to select which checks SQL Defrag Manager performs before running a policy. These checks define the conditions that allow a policy to execute. If the conditions are met, SQL Defrag Manager runs the policy.

The following columns of information are available on the **Resource Check** tab.

### Name

Select the check box next to the name of the resource check to apply it to this policy.

### Comparison

Select how the resource check evaluates the value for this type:

- Numeric comparisons
  - is equal to
  - is not equal to
  - is greater than
  - is greater than or equal to
  - is less than
  - is less than or equal to
- Alphanumeric comparisons
  - is equal to
  - is not equal to
  - contains
  - does not contain
  - starts with
  - does not start with

### Value

Type the value to which the resource check compares data.

 Leave the **Executing Job Name** resource check value empty to prevent the policy from running when any other job is running.

### Details

Describes the resource you want SQL Defrag Manager to check.

### Resource Check Options

Allows you to **Verify Server Support** for the Resource Checks previously established to run the policy. You can also set the policy to cancel automatically if the resource checks prevent it from running for a defined period of time.
