

New features

SQL Defrag Manager provides the following new features:

3.3 New features

- **Import policies**
Allows you to import policies from XML files. [Click here](#) to learn more.
- **Export policies**
Allows you to export policies to XML files. [Click here](#) to learn more.
- **Navigation tree filtering option**
Allows you to filter the items displayed in the SQL Defrag Manager Explorer by specific name or by keywords (using wildcards). [Click here](#) to learn more.
- **"Rediscover Objects" action for databases and tables**
Allows you to quickly Rediscover Objects within a specific database or table. [Click here](#) to learn more.
- **Supports SQL Server 2014**
SQL Defrag Manager supports the use of SQL Server 2014.
- **Includes a new CLI option that initiates a defragmentation from the command line**
SQL defrag manager 3.2 includes a new command line option that initiates a defragmentation. Use the following syntax:

```
sqldefragc [[[ -rebuild [online]] | -reorg] -instance <instance name> -database <database name> | -policy <policy name>]
```

You have two options when using this code. You can:

- Define the defragmentation as follows: specify "rebuild" or "reorg" where "online" is optional for "rebuild"; specify the "instance name"; and specify the "database name".
- Define the defragmentation based on an existing policy by specifying the "policy name".
