

View your prescriptive analysis results

On the Analyze tab, in the History group, you can access the results of every analysis stored by SQL Diagnostic Manager for your monitored SQL Server instance.

The screenshot displays the SQL Diagnostic Manager interface for instance WINDEV2305EVAL. The main panel shows a list of findings with their priority levels. The History Browser on the right allows users to view historical analysis results. The calendar shows July 2023, and the Historical Snapshots list shows two critical issues on July 31, 2023: one at 11:11 AM and another at 9:07 AM.

Analyses are ordered by start time per the local computer running the SQL Diagnostic Manager console and include:

- Timestamp when the analysis started.
- Total number of recommendations found.
- Highest priority recommendation associated with the analysis.

To select a specific analysis:

1. Open the [History Browser](#).
2. Select the date from the calendar.
3. Select the corresponding analysis from the Historical Snapshots list.

Additional actions

Previous Analysis

Browse the previous analysis result of your SQL Server instance.

Next Analysis

Browse to the next analysis result of your SQL Server instance.

To return to Real-Time mode, click **Run Analysis** on the Analyze tab.

SQL Diagnostic Manager for SQL Server performance monitoring, alerting, and diagnostics for SQL Server.
