Tempdb Statistics

The Tempdb Statistics report lets you view space utilization and data throughput statistics over time for your Tempdb database. You can focus on a single chart type, such as data file growth, and track its value increase over a specified period of time. This report allows you to obtain statistics through different metrics or chart types: Data File Size MB, Data File Growth, Reads Per Second, Writes Per Second, Transactions Per Second, User Objects MB, Internal Objects MB, Version Store MB, and Mixed Extents MB.

The Tempdb Statistics report is available for users with monitored SQL Server instances on SQL Server 2005 or later.

When to run this report

You should run the Tempdb Statistics report to view different space utilization and data throughput statistics currently occurring on your monitored SQL Server instances.

How SQL Diagnostic Manager calculates metric values on this report

Most values on the Tempdb Statistics report are averages of data from the system DMV sys.dm_db_file_space_usage on the monitored SQL Server.

You can access our Customer Support Portal for more information about the algorithm used to calculate a specific metric.

How does SQL Diagnostic Manager gather statistics from monitored SQL Servers? - Solution #00000055
