

# Hyper-V user requirements

In virtualized environment with Hyper-V, the process of how SQL Diagnostic Manager collects and presents metrics is slightly different from that of a VMware setup. To successfully collect Hyper-V host metrics, the user needs access to the WMI credentials on the host server. These credentials are established on the **Virtualization Host Configuration** window (Tools >VM Configuration >New or Tools >VM Configuration >View/Edit)

In addition, to successfully collect VM metrics, the user needs access to the WMI credentials on the VM. These credentials are established under on the **OS Metrics** tab of the **Monitored SQL Server Properties** window (right-click on the monitored instance name and select Properties).

SQL **Diagnostic Manager** identifies and resolves SQL Server performance problems before they happen. [Learn more](#) > >
