

Filter SQL Server events

The Filter Settings window allows you to select:

- The time range to filter events, such as **Date Range-Begin** and **Date Range-End**.
- The source of the log entry, such as the session ID number.
- The message severity, such as **OK**, **Warning**, or **Critical**.

If the alert is disabled, all messages are informational.

Access the Filter Settings window

To open the Filter Settings window from the SQL Diagnostic Manager Logs tab, select the appropriate SQL Server instance, click **Logs**, and select **Filter**.

Settings Server Log filters

To Filter the Server Log:

1. Click the **Filter** button on the Logs tab.
2. Verify that SQL Diagnostic Manager displays the correct **Source**.
3. Make the necessary changes in the **Message Severity** area.
4. Type a **Date Range-Begin** and **Date Range-End** in the **Period** section of the Filter Settings window.
5. Click **OK**.

SQL **Diagnostic Manager** identifies and resolves SQL Server performance problems before they happen. [Learn more](#) > >
