

View your prescriptive analysis results

On the Analyze tab, in the History group, you can access the results of every analysis stored by SQL Diagnostic Manager for your monitored SQL Server instance.

The screenshot displays the SQL Diagnostic Manager interface. The left sidebar shows a tree view with categories like Servers, Tags, Resources, and Analysis. The main pane is titled 'AUT-2005-001\SQL2005' and shows a list of findings under the 'Findings' tab. The findings are ordered by start time and priority. The top finding is 'The integrity of database [ML_TEST] has not been checked in 359.41 days'. Below this, a detailed view shows the physical integrity of the database [ML_TEST] and a recommendation to run DBCC CHECKDB. The right sidebar contains a 'History Browser' with a calendar for November 2016 and a list of historical snapshots.

Finding Text	Priority
The integrity of database [ML_TEST] has not been checked in 359.41 days	High
The integrity of database [msdb] has not been checked in 4049.5 days	Medium
The integrity of database [model] has not been checked in 42686.58 days	Medium
The integrity of database [master] has not been checked in 42686.58 days	Medium
SQL Server password policy is vulnerable for login sa	Low
The SQL Server user right "Lock Pages in Memory" is not being used	Low
BUILTIN\Administrators is included in sysadmin Role	Low
Authentication set to Mixed Mode	Low
The collation of database SQLdmMobileRepository, SQL_Latin1_General_CP1_CS_AS, does not m...	Low
Disallow results from triggers is OFF	Low
Database [ML_TEST] is set to [FULL] recovery mode, and the transaction log has not been backe...	Low
Database [ML_TEST] has outdated backups	Low
Database [model] is set to [FULL] recovery mode, and the transaction log has not been backe u...	Low
Database [SQLdmMobileRepository] has outdated backups	Low
Database [model] has outdated backups	Low
Database [master] has outdated backups	Low
Database [msdb] has outdated backups	Low
Database [master] is using Simple Recovery Model	Low
Database [SQLdmMobileRepository] is using Simple Recovery Model	Low
Database [msdb] is using Simple Recovery Model	Low

The integrity of database [ML_TEST] has not been checked in 359.41 days

The physical integrity of a database [ML_TEST] should be checked regularly to allow for early detection of errors so that downtime and data loss can be minimized.

Recommendation:
It is recommended that you run DBCC CHECKDB against database [ML_TEST] to ensure there are no data integrity problems.

Database: ML_TEST

Learn more about: DBCC CHECKDB

Analyses are ordered by start time per the local computer running the SQL Diagnostic Manager console, and include:

- Time stamp when the analysis started.
- Total number of recommendations found.
- Highest priority recommendation associated with the analysis.

To select a specific analysis:

1. Open the [History Browser](#).
2. Select the date from the calendar.
3. Select the corresponding analysis from the Historical Snapshots list.

Additional actions

Previous Analysis

Browse to the previous analysis result of your SQL Server instance.

Next Analysis

Browse to the next analysis result of your SQL Server instance.

To return to Real-Time mode, click **Run Analysis** or **Run Workload Analysis** on the Analyze tab.

SQL Diagnostic Manager identifies and resolves SQL Server performance problems before they happen. [Learn more >>](#)
